18 week intermediate marathon training guide

Everyone is an individual and your base level of fitness may vary. For those who already have been doing some running, this general program should give you the extra speed and endurance to take your performance to the next level.

This 18 week training guide is just that, a guide, so feel free to be a little flexible with it and make it work for you. Mix up days and runs when you need to, and if you miss a session you can make it up. The real aim is to be consistent with your training, and the overall details won't matter as much.

Here is an explanation of the terms used in this training guide:

→ Long run: The key to the guide is the long run on weekends, which ranges from 10 km to 32 km. Consistency and quality is the goal of these long runs – run at a comfortable pace, find your rhythm and enjoy building your endurance.

- → Run slow: Do your long runs at a comfortable pace, one that would allow you to converse with a training partner, at least during the beginning of the run. If you finish the long run at a pace significantly slower than your early pace, you need to start much slower. It's better to run too slow during these long runs, than too fast, the purpose is covering the prescribed distance.
- → Walking breaks: It is okay to walk during the marathon it's a long distance so listen to your body. You can walk during training runs too. In a race the best time to walk is entering a drinks station, that way you can drink more easily while walking as opposed to running.
- → Cross-training: Mondays in the training guide are for cross-training. The best cross-training exercises are swimming, cycling or walking. You don't have to cross-train the same way each week, feel free to mix it up. And you could even combine two or more exercises: walking and cycling, jogging or swimming and riding an exercise bike in a gym. Cross-training on Monday will help you recover after your Sunday long runs so make sure you treat it as a recovery session.
- ightarrow Midweek training: Sessions during the week should be done at an easy pace.

- → Pace: This is defined as the pace you need to run to take your running to the next level. If you are aiming to achieve a 3:30 marathon time then your pace would be 4:58/km. Therefore when you run your pace runs you need to run them at this speed.
- → Half marathon: The guide recommends completing a half marathon event for race experience. You'll become accustomed to the start line wait, how much fluid to drink and the feeling of running amongst hundreds or thousands of other entrants.
- → Rest: Days designated to rest are very important. Muscles actually regenerate and get stronger during rest and rest helps prevent injury. The key to this guide is consistency so if you are feeling particularly tired at any stage, take an extra rest day and get your energy back to keep going.

Don't forget to stretch! It's important to start each training session with some stretches and gentle movement to prepare your body for your workout. After your session, cool down with more stretches to help with recovery.

Fact: If you do follow this guide to the letter you will have completed nearly 925 km of running – pat on the back! Exercise safely: Talk to your GP before starting a new exercise program, especially if you have any existing health conditions.

¹⁾ The training guide is just that, a guide – it is important to make it work for you. If you want to do long runs on Saturday rather than Sunday, simply change the days. Or if you miss a run you can make it up on one of your rest days.

Check off your training each day to keep track of your achievements. Each step gets you closer to your goal!
